

List (ArrayList or LinkedList) Common Methods

Ordered sequence, each with an index.

Method	Functionality
public boolean contains(Object obj)	Check if given item obj is in this list
public int indexOf(Object obj)	Get the index of the first occurrence of given item obj
public E get(int index)	Get the item at given index
public void set(int index, E item)	Replace the item at given index by a new one
public boolean add(E item)	Append given item to the end of this list
public void add(int index, E item)	Add given item so that it's at given index when done
public E remove(int index)	Remove the first occurrence of item at given index from this list
public boolean remove(Object obj)	Remove given item obj from this list
public int size()	Get how many items in this list
